+-----+-----+-----+-----+-----+-----+-----+-----+-----+
8-28 10:10:00 |
```

I'm including my own screenshots as well from my database and table entries after running our initialization sql files so that we are all working with the same data.

```
mysql> SHOW DATABASES;
+-----+
| Database |
+-----+
| bacchuswinery |
| csd430 |
| databasedb |
| information_schema |
| moffat_bay |
| movies |
| mysql |
| performance_schema |
| sakila |
| sys |
| world |
+-----+
11 rows in set (0.00 sec)

mysql> USE moffat_bay;
Database changed
mysql> SHOW TABLES;
+-----+
| Tables_in_moffat_bay |
+-----+
| customer |
| reservation |
| room_type |
+-----+
3 rows in set (0.00 sec)
```

The screenshot shows a terminal window titled "MySQL 8.0 Command Line Cli". The user enters the command `mysql> SHOW DATABASES;` and receives a list of 11 databases: `bacchuswinery`, `csd430`, `databasedb`, `information_schema`, `moffat_bay`, `movies`, `mysql`, `performance_schema`, `sakila`, `sys`, and `world`. The output is formatted as a table with a header row and a footer indicating "11 rows in set (0.00 sec)".

Next, the user enters `mysql> USE moffat_bay;` and receives the message "Database changed". Then, the user enters `mysql> SHOW TABLES;` and receives a list of 3 tables: `customer`, `reservation`, and `room_type`. This output is also formatted as a table with a header row and a footer indicating "3 rows in set (0.00 sec)".

```
MySQL 8.0 Command Line Cli x + v
mysql> SELECT * FROM customer;
+-----+-----+-----+-----+-----+-----+
| customer_id | first_name | last_name | email | telephone | password_hash |
| updated_at | created_at |
